

Raw passthrough sampler

This file exercises the two raw-passthrough fenced-code conventions: `'lout` for arbitrary Lout source and `'svg` for arbitrary SVG snippets. The latter should be routed through the `@SVG` macro once it lands.

Raw Lout

A centred display, hand-written in Lout:

Hand-written Lout passthrough

A boxed paragraph with custom margin:

This box was emitted by a raw Lout fenced block, not by any markdown construct. The surrounding paragraphs were assembled the normal way.

Some hand-rolled Lout math using the `eq` package directly (rather than the markdown-level `$$` block):

`@Eq`

int from 0 to inf $e^{-x^2} dx = \sqrt{\pi}/2$

Raw SVG

A simple SVG snippet with a red circle and a labelled rectangle. In HTML mode this should appear inline; in PDF mode it currently passes through to the `@SVG` macro (not yet implemented â expect graceful degradation):

[inline SVG omitted in non-SVG back-end]

A second SVG snippet â a line graph sketch:

[inline SVG omitted in non-SVG back-end]

Closing paragraph â making sure that normal markdown still flows correctly *after* a stack of raw fences.
