Re: Position of Senior Audio DSP Engineer, requisition LB-2026-073.

Dear Dr. Whitcombe,

I am writing to apply for the Senior Audio DSP Engineer position posted on Lyrebird's careers page last week. My background in real-time signal processing for low-latency music applications, together with seven years of production C++ on embedded ARM targets, lines up unusually well with the role's stated requirements, and I would welcome the chance to bring that experience to your team.

For the last four years I have led the audio-engine work at Cantus Audio, where I am responsible for a 96 kHz convolution-reverb pipeline that ships on both desktop and a Cortex-A78 hardware unit. I redesigned the partitioned convolution scheduler to bring worst-case block latency from 11 ms to under 3 ms, and I wrote the test harness our QA team still uses to catch regressions. Prior to Cantus I spent three years at the Center for Computer Research in Music and Acoustics at Stanford, contributing to the *faust2* DSL compiler and publishing two papers on physically-modelled string synthesis.

What draws me to Lyrebird specifically is the company's stated commitment to publishing measurement methodology, not just product specs. I have followed your room-correction work since the original ICASSP 2023 paper, and I would be delighted to contribute to the next generation of that research. I can make myself available for an initial conversation any afternoon next week, and I have attached a CV and three representative code samples for your consideration.

Thank you for your time, and I look forward to hearing from you.

Yours sincerely,

James Clements III
