

mdlout documentation index

This page is the single jumping-off point for every piece of mdlout documentation, every worked example, and every test report. Each link below resolves relative to `examples/out/index.md.html`, the rendered form of this file. The Markdown source lives at `examples/index.md`.

Get started

- Tutorial¹ – a guided path from install to a rendered document in eight short sections.

Browse examples

- Example gallery (Markdown source)² – one entry per committed example with thumbnails, frontmatter, and rendered output links.
- Example gallery (rendered HTML)³ – the same gallery as a browser-ready page with embedded thumbnails and preview links.

Recipe by feature

The cookbook⁴ collects 35 short, self-contained recipes. Each entry below jumps to the matching chapter.

- 1. Three-column poster⁵
- 2. Math-heavy lecture notes⁶
- 3. Multi-chapter book⁷
- 4. Slides with images⁸

⁸`../../docs/cookbook.md#4-slides-with-images`

- 5. Code-heavy manual¹
- 6. Letterhead / single-page form²
- 7. Drop caps and pull quotes (raw Lout passthrough)³
- 8. Inline ABC music notation⁴
- 9. Custom mydefs macros (the sidecar file convention)⁵
- 10. Tables with alignment markers⁶
- 11. CV / resume layout⁷
- 12. Conference handout⁸
- 13. Exam / quiz paper⁹
- 14. Scientific report with bibliography¹⁰
- 15. Recipe / cookbook page¹¹
- 16. Mermaid flowchart¹²
- 17. Marginalia / sidenotes¹³
- 18. Multilingual document¹⁴
- 19. Footnoted poetry¹⁵
- 20. Auto-generated TOC + cross-references¹⁶
- 21. Book chapter with epigraph + footnotes¹⁷
- 22. Two-sided letter¹⁸
- 23. Inline diagrams via @Mermaid in a math-heavy doc¹

- 24. Hand-rolled @Graphic SVG diagram²
- 25. Embedded ABC sheet music with chord names³
- 26. Reusable mydefs macros across many documents⁴
- 27. Tracking changes via @Strike / @Insert⁵
- 28. Calendar grid⁶
- 29. Index and glossary at the back⁷
- 30. Custom page headers/footers per chapter⁸
- 31. Numbered theorems, lemmas, and proofs⁹
- 32. Two-column code with side-by-side annotations¹⁰
- 33. Including SVG diagrams from external files¹¹
- 34. Using @Strike (strikethrough) from Markdown¹²
- 35. Combining columns: 2 with multi-page content¹³

Troubleshooting

- FAQ¹⁴ – common errors, KaTeX/abcjsharp loading pitfalls, frontmatter gotchas, and the meaning of every Lout warning mdlout has been seen to emit.

- CONTRIBUTING¹ – coding conventions, the examples gauntlet, and how to file a regression-safe PR.
- ROADMAP² – shipped milestones and the next-up features (math autocomplete, native diagram DSL, more page styles).
- CHANGELOG³ – every tagged release with date and one-line summaries of behaviour changes.

Publish

- Publishing your document⁴ – author-facing notes on font embedding, paper sizes, hosting the rendered HTML, and the print-shop handoff.
- PyPI release process⁵ – maintainer-facing notes on tagging, building the sdist, smoke-testing the wheel, and uploading.

Deep dives

- Best practices⁶ – patterns the examples corpus has converged on for frontmatter, mydefs hygiene, cross-reference stability, and PDF/HTML parity.
- Architecture⁷ – the four-phase mdlout pipeline, where each markdown extension is parsed, and how the SVG scaffolding wraps the Lout output.
- z53.c internals⁸ – the SVG back-end inside the Lout fork, function by function, with cross-references to z49.c.
- CI⁹ – how `bash tests/run_all.sh` is wired into GitHub Actions, what each job gates, and where the artifacts land.
- SVG porting plan¹⁰ – the living function table for porting z49.c (PostScript) operators to z53.c (SVG).
- SVG performance notes¹ – profiling numbers, hot paths in z53.c, and the budget for each

emission primitive.

Test reports

- Snippet regression report² – per-snippet pass/fail with side-by-side PostScript vs SVG renderings.
- User-guide diff report³ – the full Lout user guide, page-for-page, before and after the SVG back-end.
- Lout doc renders⁴ – every document under `lout/doc/` rebuilt under both back-ends.
- Profile output⁵ – gprof and callgrind captures from the heavy user-guide build.
- Snippet history⁶ – per-commit pass-rate trend across the snippet corpus.
- Build benchmarks⁷ – wall-clock and memory numbers for the canonical workloads, tracked over time.
